# Underground Hydrant
# SIMPLE DN100

HIDN100

Fire **Hydrant** for underground installation. May include the valve box and cover for installation (depending on the model).
A Hydrant is a device that supplies a large amount of water in a short time.
It allows the connection of hoses and firefighting equipment, as well as the filling of firefighters' water tanks.
Designed for situations where space is limited, such as on sidewalks in large cities. Because it remains underground, the risk of frost damage is minimal.
