DOUBLE SQUARE 128m²

Shading solutions with textile architecture: Tensioned structures perfect for covering all types of open spaces, either fully or partially, and creating cool, shaded spaces.

At BENITO , our GEOVELA S are the perfect solution to transform any outdoor space into a cool, safe and comfortable environment. Designed with high-quality materials and innovative textile architecture, our tensioned covers adapt to projects of all sizes and styles, offering unique benefits for each space.

High-Quality Microperforated HDPE Fabric, designed to deliver maximum quality and strength. Its warp-knit structure ensures it does not fray or tear, maintaining its integrity even under demanding conditions. Made of 100% round monofilament yarn, it provides superior structural stability thanks to its perfect balance between warp and weft. In addition, it is highly durable, as it does not rot or absorb moisture, making it ideal for long-term outdoor use.

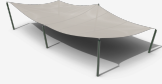

Durability and Protection: This fabric comes with a 12-year warranty against UV degradation, ensuring long-term performance. With a UV blockage capacity ranging from 90.1% to 94.9%, it offers effective protection against sun exposure, allowing safer and more comfortable enjoyment of outdoor spaces.

Structure: made of hot-dip galvanized steel tubes or coated with polyester powder paint, ensuring high corrosion resistance and an aesthetic finish. Designed for different heights, it allows double-curvature shapes that combine design with wind stability. The pillars include rings and eyelets for quick and secure assembly, along with a base plate for solid anchoring to the foundation. Tensioning is achieved using electro-galvanized steel cables Ø 8/10 mm, with hardened aluminum clamps and galvanized turnbuckles, ensuring durability and precise adjustment.
