**DORIA designer Litter Bin , overall dimensions (Ø x H 1 x H 2) 620x910x820 mm, 3x75 litres, made of sheet steel (treated with the Ferrus process, the triple-layer iron protector, which guarantees optimal corrosion resistance), with a central ashtray (with a cigarette snuffer and its own bucket) and three different waste inlets (with a bag-holding system), each marked with the color and universal pictogram identifying the waste. Lockable with a standard triangular key, with an automatic locking system, for 75-liter bags. Prepared for anchoring with three Ø10 expansion bolts, depending on the surface and project. Optional not included: Customizable marking with 74x35 mm/80x100 mm aluminum plate.**

**Steel with a hot-dip galvanizing treatment to protect** it from corrosion. Our galvanizing process complies with the UNE EN ISO 1461:2009 standard and involves immersion in a crucible of molten zinc at 450°C, during which a reaction occurs between zinc and steel resulting in different layers of alloy between the two metals, culminating in an external coating of pure zinc. To ensure proper application of the process, it is essential to subject the pieces to a preliminary process of degreasing, pickling, and fluxing.

**Steel with FERRUS treatment**: an iron protection process that ensures optimal corrosion resistance. The Ferrus treatment consists of three layers applied after cleaning all dirt and impurities using shot blasting, and it involves an electrolytic bath followed by an epoxy primer and a final coating of polyester powder paint.
