Treated pine wood

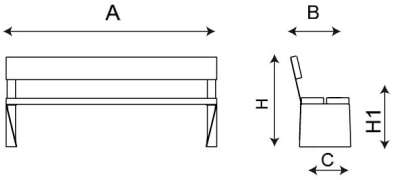

Low maintenance

ISO 9001 ISO 50001 ISO 14001 ISO 45001

LAO PT designer Bench (painted), overall dimensions (length x height x depth) 1800x850x565 mm, made of pine wood treated against woodworm, termites, and insects, and painted steel sheet in MARSON color. Galvanized steel legs and stainless steel screws. Prepared for anchoring with Ø10 screws depending on the surface and project. Available at reBnew.

Pressure-treated pine wood, risk factor IV, ensuring its durability outdoors for a minimum period of 10 years. Under weather conditions, treated wood develops a warm honey-brown color that eventually turns into a natural silver-gray. If exposed to variable weather conditions, this type of pine wood may develop some surface cracks that do not diminish its durability in any way. Regarding resin and knots, it's important to note that these are part of its natural appearance.

Corten steel: The material itself creates its own protection through oxidation. The oxidation process goes through different stages of color until it reaches "stop," which is when it acquires its final color and stops losing rust and staining.
The oxidation process and its tone vary depending on the location where the product is installed and the sun/rain/wind cycles to which it is exposed.
