

VCDP12
Collection point
EKA

EKA 12 selective collection point, for 12 bins, total dimensions (length x width x height) 3000x1800x1500 mm, made of galvanized steel and Dibond sheet fixed to the front with anti-graffiti laminate. They can take all the most common household waste fractions (organic, packaging, paper and cardboard, rejects, and glass) to the collection point on the corresponding day according to a collection calendar. Its modular system allows the creation of structures according to the number of collection bins to be covered. Anchored in soft ground on a prepared surface, according to the surface and project.

Steel with a hot-dip galvanizing treatment to protect it from corrosion. Our galvanizing process complies with the UNE EN ISO 1461:2009 standard and involves immersion in a crucible of molten zinc at 450°C, during which a reaction occurs between zinc and steel resulting in different layers of alloy between the two metals, culminating in an external coating of pure zinc. To ensure proper application of the process, it is essential to subject the pieces to a preliminary process of degreasing, pickling, and fluxing.
