BAS-MOBILIAR

Area

Area Skate N7

W2627SD

Miniramp Spine
JSK611

Lot of 1 facility intended for skateboarding: **Minimum recommended area 19.2m x 8.9m / 170.9 m^2**
Skates elements are of modular construction, allowing for easy modification of the module placement to suit the needs of each group of skaters. They are simple and inexpensive to maintain, and if properly cared for, the deck is weather-resistant. Suitable for any type of wheeled sport (skateboarding, rollerblading, BMX, scootering). They offer excellent grip and their surface does not overheat.
Its structure is made of hot-dip galvanized steel with reinforced tubular profiles and leveling feet, guaranteeing high resistance to corrosion, heavy use, and stable installation. The handrails are made of galvanized steel tubing, offering a low-friction surface and high wear resistance. The walking surface is made of 12 mm HPL panels, with good grip, low sound absorption, metal transition plates, and a flush fixing system that improves user safety.
